

Aptika®

SignPack

Capture & save signatures easily

SignPack is a signature capture software that supports major electronic signature pads and incredibly easy to use.

* Signature pad sold separately.

SignPack

PRODUCT OVERVIEW

SignPack is an advanced signature capture software for Windows that supports major electronic signature pads. It allows you to save a signature using one of 11 built-in image formats and is extremely powerful and incredibly easy to use.

When buying a signature pad, it usually comes with plug-ins to capture signatures in Word, Excel and PDF files, but the quality of the signature is still very limited. What can you do if you need to capture the signature and save it into an image format? **SignPack** has the solution for you. It allows you not only to capture a signature via a user-friendly interface, but also to change pen color and size and then save the signature in an image format. You can also send a captured signature directly to the clipboard and paste it into your preferred application when publishing, emailing, editing, for website purposes and much more!

Aptika has developed its own signature capture engine that allows you to capture signatures in vectorial format instead of bitmap. The result is amazing: signature curves are smooth and can be captured in a bigger size than the resolution of the original capture device allows, without losing any quality. It also comes with an Anti-Aliasing feature that renders the signature in a more natural way and when printed using a color printer, it is very hard to see that it's not signed for real. Easy to learn and use, **SignPack** is well documented and installation is completed in a few minutes.

HOT FEATURES

- It captures unlimited signatures
- It saves the signatures individually
- You can change the pen color, the background color and the brush size
- You can stamp your name and the date/time into the signature
- You can capture many signatures in different sizes
- You can draw signatures in vectorial mode (much more precise than bitmap)
- You can send signatures directly to the clipboard
- You can save your signature in an image format
- It comes with built-in support for JPG, PNG, TIF, PCX, TGA, BMP, WMF, EMF, PSD, GIF and SEF files
- You can encrypt your signature for security reasons when saving
- It supports all Topaz Systems and Interlink Electronics signature pads
- It supports transparent background

Stock #: APT-500

SYSTEM REQUIREMENTS

- Plug a signature pad into your computer
- Windows 98, NT 4.0, 2000, XP or Me
- PC Pentium 600 MHz or higher is recommended
- 128 MB RAM
- CD-ROM drive (for software installation)
- 50 MB free space on hard disk
- Microsoft DirectX 8.1 or higher
